Watchlist by the official sponsor of React Summit 2025

5 workshops worth of your time

1. Build and customize a node-based workflow builder

- **Our take:** Walk away with the skills to build powerful, production-ready node-based UI. Developers will meet best practices for enhancing user experience and extending diagram functionalities to meet intuitive and scalable application requirement.

2. Bringing and Running AI Agents in the Browser

- **Our take:** This session explores practical approaches to implementing AI agents directly in the browser using LLMs, RAG, and tool-based functions — a great opportunity for JavaScript developers looking to embed intelligent behavior into their web applications.

3. React Query – Beyond the Basics

- **Our take:** Mastering advanced React Query techniques such as prefetching, pagination, cache seeding, and state persistence is what sets experienced developers apart — and significantly enhances both performance and user experience in modern applications.

4. React in Patterns

- **Our take:** This workshop offers a comprehensive overview of React design patterns, covering state management, server-side rendering, routing, testing, and building design systems. Ideal for developers looking to deepen their understanding of scalable React applications.

5. Defensive Coding

- **Our take:** This hands-on session is focused on safeguarding applications from common JavaScript vulnerabilities such as prototype poisoning and injection attacks. Participants can learn defensive programming techniques and code isolation strategies.

5 top talks

1. Zero-Styling Development: Utopia or the Future of Frontend?
2. React Compiler Internals
3. AI-Powered Frontend Development: Building Better UIs Faster
4. Maximize Productivity with AI Agents
5. SPA to SSR and Everything in Between
